Dear Sir/Madam,

I introduce myself to you as a person who has an impeccable employment history and an exemplary employment record of acquired achievements, experience, qualifications, and certifications. My resume and online career portfolio website will demonstrate to you that I am standout candidate for employment in your company.

I have worked in industrial maintenance reliability engineering for over thirty years encompassing discrete and process production and manufacturing industries. The last two decades I have worked in the capacity and held job titled roles in the lean six sigma continuous improvement modalities. I brought with me into lean six sigma and continuous improvement aspects of my reliability maintenance engineering experience to bear in this direction in my career.

My technical skills are leveraged by my people skills. I firmly believe that there is equally as much a philosophy as there is as much a technology behind what we do in that all machines, processes and systems are conceptualized, designed built, installed, commissioned, operated, maintained, continuously improved and innovated by people. If we are to have machine, process and system reliability we must first have people reliability and lest we forget the human side of enterprise as a company core value. I can help your company to attain and maintain your objectives in reaching your operational goals by benefiting from my career path that has evolved into one of STEM knowledge, managerial learning and my strengths in advance problem solving, project management and being a teacher, trainer, mentor and coach

Allow me in person to give you and your management team a demonstration of my abilities from past achievements that I can bring to your company. I welcome the opportunity of an interview with you to discuss how I can be a contributing member of your team. Thank you.

Yours sincerely,

Fred Webberking

Fred Webberking.
